WE DESIGN AND BUILD FREE INTERACTIVE MULTIMEDIA DIGITAL SCHOOLBOOKS

Students have been using the equivalent of digital book technology for a long time now, and in some cases, it has even provided some educational benefits—but not in our schools. Computer games have replaced TV in the lives of our youth, and consume an enormous amount of their time. It is a simple fact that this technology engages and stimulates their users, and provides hours and hours of excitement and enjoyment each day. If this is the case, then why don't we utilize these technologies for the education of our students, and build our schoolbooks and study materials with the same engaging and exciting elements as our computer games.
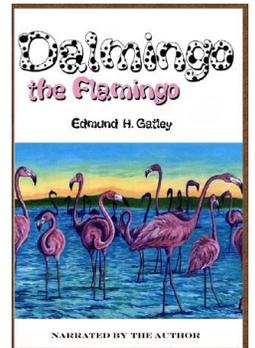

The Interactive, Multimedia, Digital Schoolbook. Digital textbooks, individual chapter modules, readers, workbooks, reference materials, teaching and studying aids, and many other forms of digital education technologies are now readily available through the **National Digital Schoolbook Library Program** that will excite, engage, and stimulate our students to remain in school and partner with their teachers in the learning experience.

From Pre-K through college and beyond, digital books place a universe of knowledge at our fingertips with just a push of a button.

Digital Schoolbooks use audio and video presentations of the nation's best teaching professionals, celebrities, sports personalities, and persons of recognition to accompany and assist our students throughout their educational journey. No longer will our students be alone as they read, study, and learn during their academic career.
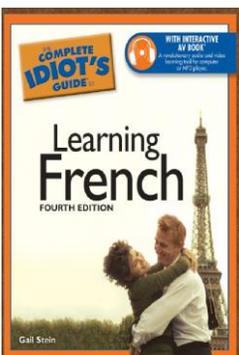

Pop-up videos and pictures, interactive multimedia, and yes, even educational video games are all an integral part of every digital book, module, and teaching aid.

Remember how easy that math problem seemed, when the teacher worked it out on the blackboard? But, when you sat down at home to study, it didn't seem so easy anymore! Now, students can take the teacher home with them, as homework and understanding the subject become easier with classroom visual representations that pop right out of the pages of their digital books.

If students' eyes need a break from a long study session or, if they are multitasking, their digital books will read to them in a human voice (maybe even a famous voice that they might recognize!).

Any portion of the digital book can be highlighted in multiple colors, and that colored highlight or all highlights can be read back at any time, as a study review for a test, or for multitasking.

Unlike paper textbooks and workbooks, once a digital book is produced, a single book can be distributed to millions of students. Note-taking can be done right in the textbook, reader, or workbook, and it never compromises the digital book, since each student's notes and highlights are only visible to the user under his or her security password.

Notes and highlighted sections can also be exported and imported into other documents for study or presentation. Print size can be made larger or smaller. Single page and traditional two-page book formats can be selected. A click on any item in the Table of Contents or Index takes you right to that page. Dictionary, Thesaurus, and Word Search, as well as many other features and tools are also always available.

Digital schoolbooks make reading, studying, and learning much easier, infinitely more efficient and effective, while making school and the learning process more interesting and enjoyable, and a new adventure every day!
